1 Manufacturer's address

BINDER GmbH & Co. KG

Reichardstraße 16, D-31789 Hameln Tel. +49 (0)51 51/ 96 26 6-0 Fax. +49 (0)5151/ 96 26 6-49 Mail: info@binder24.com www.binder24.com

2 General

2.1 Important information

Operation Guarantee	Observance of these operating instructions is essential to ensure trouble-free operation and in order for any warranty entitlements to be honoured. Therefore, please carefully read through the operating instructions before working with the counter current unit.
Intended use	The turbine swimming pool is intended for use in privately used swimming pools according to DIN EN 16582 . It only be used in public swimming pools in special solutions.
1 Note	This operating manual includes instructions on storage, assembly, operation and maintenance of the HydroStar counterflow unit BGA 160, BGA 215, BGA 275, BGA 320, BGA 430 and BGA 550.
Start-up Maintenance Installation	The personnel entrusted with the handling, storage, installation, start-up, inspection and maintenance of the machine must be qualified for industrial, mechanical and electrical equipment.
Disposal	The current and regional regulations must be observed for disposal. Grease and oil must be disposed of in accordance with applicable environmental protection regulations. This device is not intended to be used by persons (including children) with limited
1 Note	physical, sensory or mental aptitude or lack of experience and/or knowledge unless they are supervised by a person responsible for their safety or have received instruction from this person as to how the device is used. Children should be supervised to ensure that they do not play with the device.
ÁDanger	If the mains connection cable for this device is damaged, it must be replaced by the manufacturer or its customer service department, or a similarly qualified person to prevent any hazard.

2.1.1 Technical data

	BGA 160	BGA 320
Supply voltage	230 VAC	230 VAC
Frequency range	47 – 63 Hz	47 – 63 Hz
Rated current	6 A	12 A
Starting current (typical)	60 A	60 A
Rated power	1350 VA	2700 VA
Motor		
Motor type	1 Brushless DC motor	2 Brushless DC motors
	(BLDC)	(BLDC)
Rated voltage	24 VDC	24 VDC
Rated current	50A	2 x 50A
Rated rotational speed	2400 min ⁻¹	2400 min ⁻¹
Turbine		
Discharge rate	50 – 160 m³/h	100 – 320 m³/h
Speed (turbine outlet)	1.0 – 3.2 m/s	1.0 – 3.2 m/s
Water temperature	+5° C to +40° C	+5° C to +40° C
Immersion depth	0.20 m – 1.00 m	0.20 m – 1.00 m

	BGA 215	BGA 430
Supply voltage	230 VAC	230 VAC
Frequency range	47 – 63 Hz	47 – 63 Hz
Rated current	8 A	16 A
Starting current (typical)	60 A	60 A
Rated power	1500 VA	3000 VA
Motor		
Motor type	1 Brushless DC motor	2 Brushless DC motors
	(BLDC)	(BLDC)
Rated voltage	24 VDC	24 VDC
Rated current	40A	2 x 40A
Rated rotational speed	2400 min ⁻¹	2400 min ⁻¹
Turbine		
Discharge rate	65 – 215 m³/h	130 – 430 m³/h
Speed (turbine outlet)	1.0 – 3.2 m/s	1.0 – 3.2 m/s
Water temperature	+5° C to +40° C	+5° C to +40° C
Immersion depth	0.20 m – 1.00 m	0.20 m – 1.00 m
	BGA 275	BGA 550
Supply voltage	230 VAC	230 VAC
Frequency range	47 – 63 Hz	47 – 63 Hz
Rated current	8 A	16 A
Starting current (typical)	60 A	60 A
Rated power	1700 VA	3400 VA
Motor		
Motor type	1 Brushless DC motor	2 Brushless DC motors
	(BLDC)	(BLDC)
Rated voltage	24 VDC	24 VDC
Rated current	50A	2 x 50A
Rated rotational speed	2400 min ⁻¹	2400 min ⁻¹
Turbine		
Discharge rate	80 – 275 m³/h	160 – 550 m³/h
Speed (turbine outlet)	1.0 – 3.2 m/s	1.0 – 3.2 m/s
Water temperature	+5° C to +40° C	+5° C to +40° C
Immersion depth	0.20 m – 1.00 m	0.20 m – 1.00 m

2.1.2 Information for the user / target group

This documentation contains the necessary information for proper use of the products described therein. It is intended for technically qualified personnel.

Qualified personnel are persons who - because of their education, experience, instructions, and knowledge about corresponding standards and regulations, rules for the prevention of accidents, and operating conditions - are authorised by the person responsible for the safety of the machine to perform the required actions and who are able to recognise and avoid potential hazards (definition of qualified personnel according to IEC 364)

2.1.3 Hazard information

The following directions are for the safety of the service personnel as well as for the safety of the described products as well as any connected devices.

Danger! Rotating/rotating components.

Failure to observe this can result in death, serious injury or property damage.

- Please note that there are no persons in the inflow and outflow area of the turbine swimming system before the start!
- Please note that no objects (such as toys), body parts or body-worn accessories are placed in the openings (suction openings and discharge openings)!
- Never before starting the turbine swimming system, nor during the operation of the turbine swimming system!

Danger! Dangerous electrical voltage. Failure to observe this can result in death, serious injury or property damage.

- Isolate supply voltage before installation or removal work as well as in case of fuse replacement or modifications of the setup.
- Observe the accident prevention and safety regulations that apply to the specific area of use.
- Before putting the machine into operation, check whether the rated voltage coincides with the local mains voltage.
- Emergency stop devices must remain operational in all modes of operation. Disabling the emergency stop devices may not cause an uncontrolled restart.
- The electrical connections must be covered!
- Ground wire connections must be checked for fault-free function after installation!
- The conditions described in DIN VDE 0100-702:2003-11 must be observed.

2.1.4 Validity

This document applies to the HydroStar counterflow units from the BGA product line.

Safety information

Adherence to this information is the prerequisite for trouble-free operation and the fulfilment of any guarantee claims.

2.1.5 Proper use

Note: The devices described here are electrical equipment for use in swimming pools and other pools and may only be used under the following conditions:

Exceptions: The manufacturer has designed the product specifically for other applications and ambient conditions.

The counterflow unit

- ...must only be used for the intended purposes and those confirmed in the shipping documents.
- ... must only be operated under the operating conditions stipulated in the operating instructions and within the power limits.
- ... is a component for use in privately-used swimming pools with a salt content <0.4% (See Note below)
- ... complies with the valid standards and regulations.

Improper use

- Use in potentially explosive areas
- Use in harsh environments (acids, gases, vapours, dust, oil)
- Use in a sewage area
- Use of the turbine above water

Improper enviroment

- Observe the surrounding material (filling material) of the installation shaft
- Depending on the filling material, the installation shaft must be protected
- When using filler material with high chloride and sulfate fractions, the stainless steel housing must be protected against these damaging substances with a PE film (protective film)

I Note

The HydroStar is a component for use in swimming pools with a salt content <0,4%. It's forbidden to put the salt into the swimming pool within a radius of 2 meter around the HydroStar. For applications with a salt content >0,4% contact company Binder.

2.1.6 Operating conditions

Control box:	
Ambient temperature:	0° C to +50° C
Site altitude:	up to 1000 m above sea level
Turbine:	•
Water temperature:	+5° C to +40° C
Immersion depth:	0.30m to 1.00m below the surface of the water

2.1.7 General safety and application notes

At the time of delivery, the counterflow unit and its components are considered to be state of the art and fundamentally safe to operate.

All transport, storage, installation/assembly, connection, commissioning, maintenance and servicing work may only be performed by qualified personnel.

During such work, qualified personnel must observe:

- the supplementary safety instructions in the individual chapters of this documentation.
- the safety instructions in attached supplementary sheets and further documents from subcontractors.
- this documentation and the circuit diagrams in the control box.
- the warning and safety signs on the devices.
- the machine-specific regulations and requirements.
- the national and regional regulations for safety and accident prevention.

The counterflow unit can pose a risk to persons, the machine itself and other property belonging to the operator

- ... if unqualified personnel work on or with the drive system.
- ... if the drive system is used improperly.
- ... if the drive system is installed and operated incorrectly.
- ... if the following notes are disregarded:
- Only operate the counterflow unit if it is in perfect working order.
- As a general rule, any retrofitting, changes or reconstruction of the drive system is prohibited. The above work may only be performed after consultation with the manufacturer.
- During operation and for an extended period afterwards, the components may have live parts, moving parts and hot surfaces.
- Start-up (start of proper operation) may only be carried out once it has been confirmed that the machine complies with EMC Directive 2004/108/EC and that the machine conforms to Machinery Directive 2006/42/EC.
- o Observe EN 60204.

Should you have any questions or problems, please contact your representative.

2.1.8 Disposal

The drive unit must be disposed of in compliance with the currently applicable regulations of the respective country. Grease and oil contained in it must be disposed of in accordance with applicable environmental protection regulations. Electronic elements and components must be disposed of through a certified specialised company.

2.1.9 Scope of supply

- Prewired control unit with built-in options in accordance with the specification
- Turbine with a 10m connecting cable
- Additional accessories as listed in the accompanying papers.

After receiving the delivery, check the delivery contents against the accompanying papers to make sure they are complete.

The manufacturer does not offer warranty for claims regarding missing parts submitted at a later date. Any transport damage that is discovered must be reported to the shipping agent without delay.

3 HydroStar installation shaft

The HydroStar standard installation shaft is suitable for all standard pool types.

3.1 Scope of supply

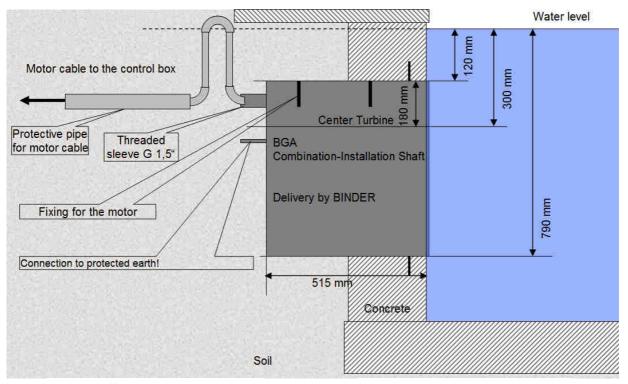

The HydroStar installation shaft comes complete with all required accessories.

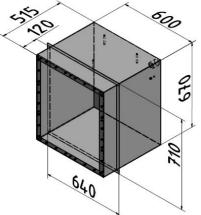

- Installation shaft
- Spring-loaded frame with seals and screws
- Cover plate with fastening bolts
- Additional accessories as listed in the accompanying papers.

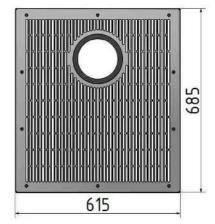

After receiving the delivery, check the delivery contents against the accompanying papers to make sure they are complete.

3.2 BGA 160/215/275, installation in skimmer or overflow pools

Top of the installation shaft is recommended 120 mm under water level

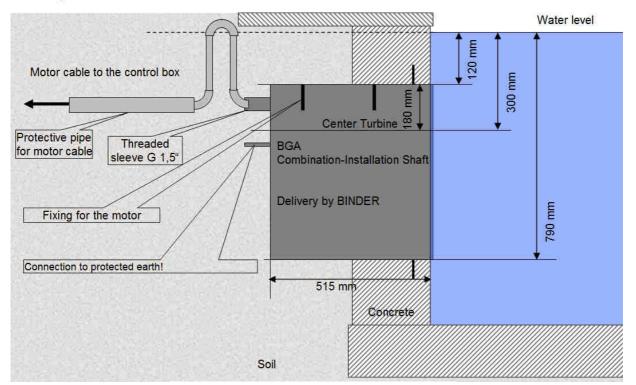

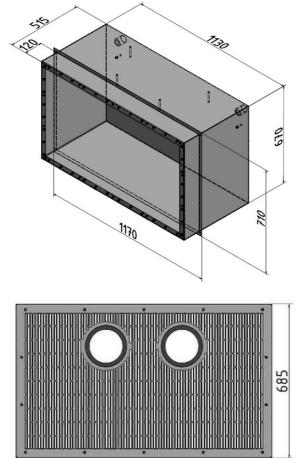

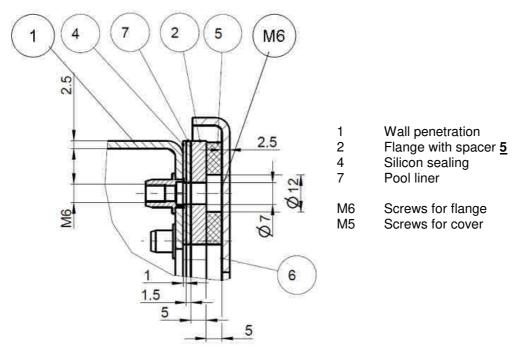

3.3 BGA 320/430/550, installation in skimmer or overflow pools

Top of the installation shaft is recommended 120 mm under water level

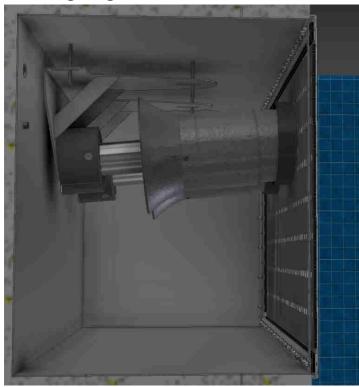

3.4 Installing the spring-loaded flange

- The contact surfaces of the wall penetration (1) must be free of sand and concrete remnants.
- The contact surface must be grease-free by cleaning with an appropriate cleaner.
- Remove the paper on one side of the seal (4)
- Put the adhesive side of the seal on the frame of the wall penetration. Take care not to cover the attachment holes.
- Put the pool liner (7) on top of the seal and poke holes for the screws.
- Put spring-loaded flange in place and attach with the M6 screws.
- Observe the specified tightening torque (7 10 Nm)!

3.5 Aligning the turbine

- The turbine is installed with an adjustment bracket in a hanging position.
- Attach the adjustment bracket with the turbine to the stay bolts.
- The top nuts determine the positioning and also the flow of the turbine.
- The factory setting for the discharge angle is approx. 4°. In most cases, the angle does not have to be changed.
- Based on pool size, depth, and user requirements, the angle can be adjusted by means of stay bolts.
- Then, adjust the height of the turbine.
- Tighten and lock all nuts securely.
- The flow plate with the flow aid can only be installed when the turbine is correctly aligned.

3.6 Installation of the cover plate

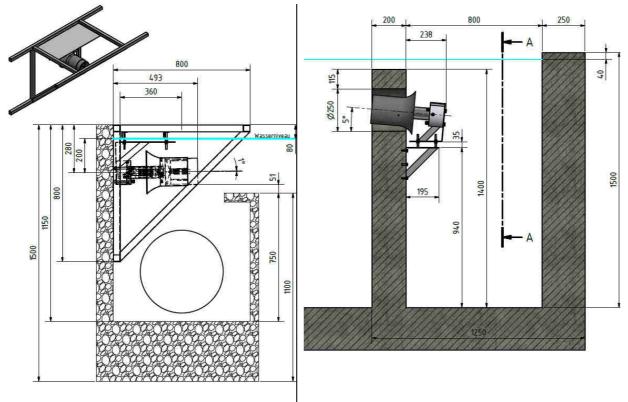

- Align the turbine and do a trial run
- Do not install the cover plate (3) until the turbine is correctly aligned.
- There is a flow aid attached to the inside of the cover plate.
- The cover plate cannot be installed until the turbine is correctly aligned and protrudes into the flow aid.
- Place the cover plate on the press frame (2) and fix it with the countersunk head screws M5, while supporting the cover plate with one hand or slightly lifting it to prevent damage to the countersunk head screws.
- Observe the specified tightening torque (4 6 Nm)!

4 Turbine without HydroStar installation shaft

- The turbine is designed for use under water.
- It is to be installed under the surface of the water at a suitable location in the swimming pool (Center turbine 300mm under water level).
- Protective equipment may be necessary to ensure that swimmers do not come into contact with the turbine.
- It must be ensured that an adequate water quantity is fed in.
- The motor cable must be installed so that it is not drawn in by the water current.

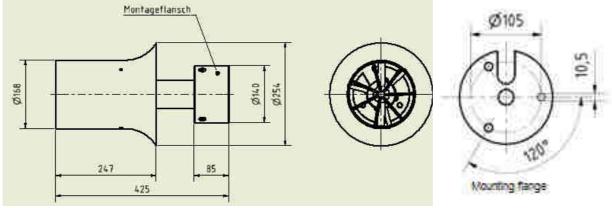

4.1 Installation example for a BGA turbine

i NOTE

The illustration is only given as an example. The machine builder is responsible for the planning and professional installation as well as installation of any required protective equipment!

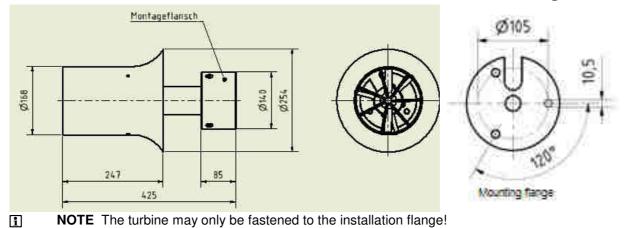

4.2 Dimensions of turbine BGA 160/320 with installation flange

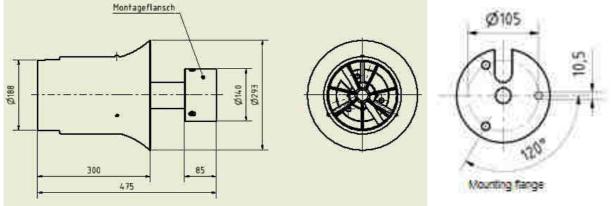

I NOTE The turbine may only be fastened to the installation flange!

4.3 Dimensions of turbine BGA 215/430 with installation flange

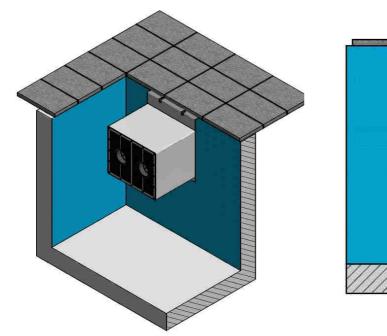

4.4 Dimensions of turbine BGA 275/550 with installation flange

NOTE The turbine may only be fastened to the installation flange!

5 HydroStar BGA 160/320/275/550 C for retrofit installation

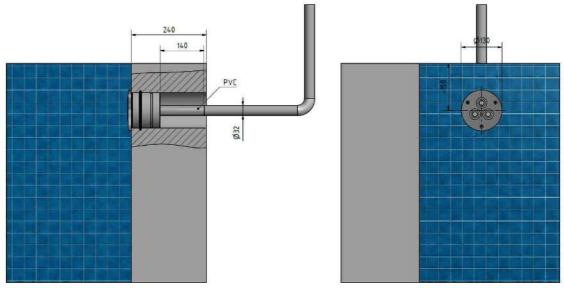

- These units are ready for installation and manufactured according to order instructions.
- The frame must be securely attached to the pool edge.
- No attachment at the pool floor is necessary.
- The feet should be adjusted so that the unit stands securely and the frame is not perpendicular.
- The motor cable must be installed so that cannot be damaged.
- The installation shaft must be completely under water.
- The unit's suction is on the bottom and front side. It must be ensured that the suction slits are never clogged and water flow is guaranteed.

I NOTE

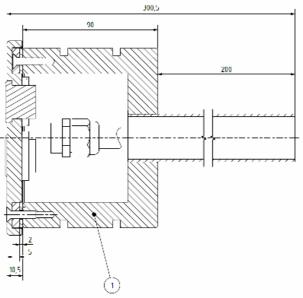

- Do not climb on the frame or the installation shaft.
- Do not use the installation shaft as a "starting block".
- Do not push-off from the cover plate.

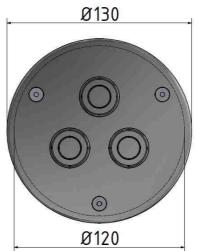

6 PIEZO Tri / PIEZO Tri Square, installation

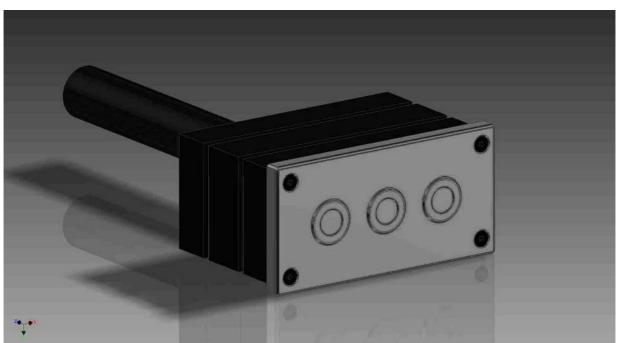

PIEZO Tri, installation in pool wall, installation shaft Ø120

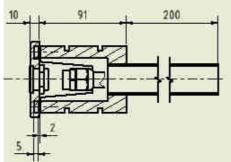

PIEZO Tri, installation shaft Ø120, cover plate Ø130

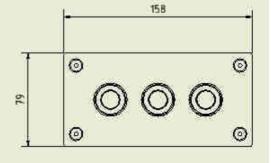

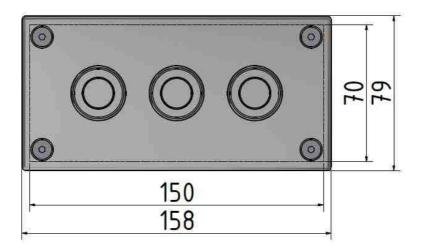

PIEZO Tri Square, installation shaft with cover plate

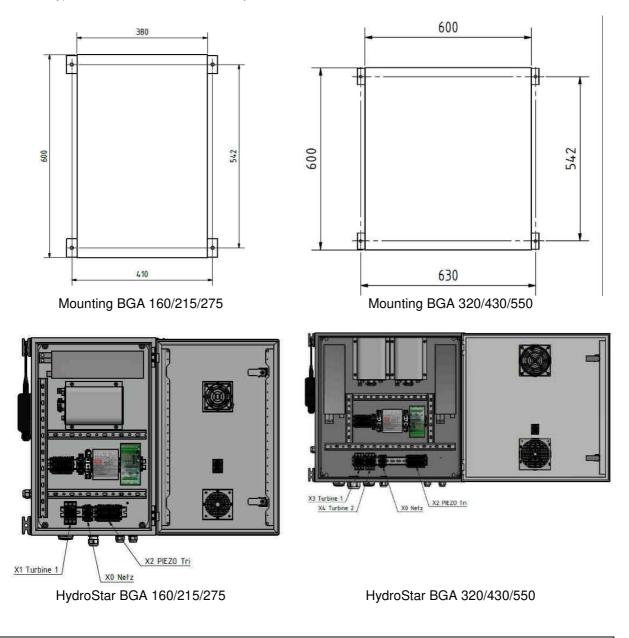

PIEZO Tri Square, installation shaft 150 x 70 mm

7 Control unit

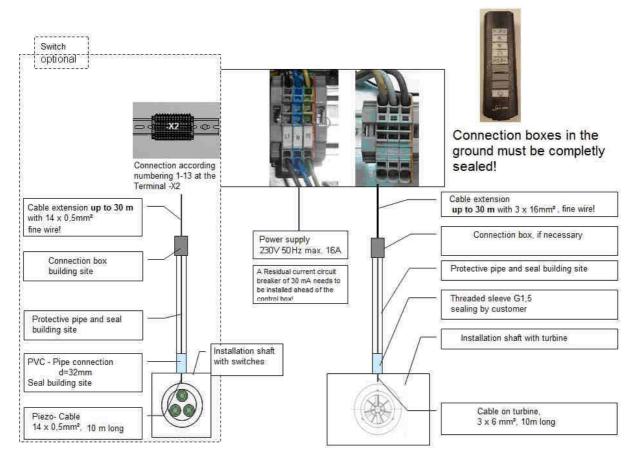

- Observe DIN VDE 0100-702 (Installation of low voltage systems, Section 702: Swimming pools and other pools).
- The control unit must be installed in area 2 as per DIN VDE 0100-702. The power lead-in must be equipped with residual current protection (RCD) with a rated residual operating current of ≤ 30mA.
- The system must have a 16 A inert fuse installed.
- Installation in a dry room in which other technical equipment for operating the swimming pool is installed. The room should be a maximum of 10 m from the pool.
- The control unit is designed for wall mounting. It is mounted with 4 screws Ø 8 mm (not included in delivery). It must be fixed in such a way that the cable entries are on the bottom.

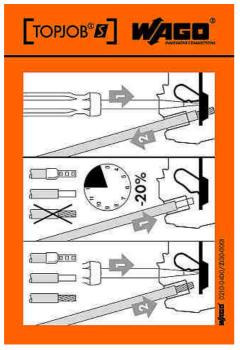

7.1 Connection block diagram

The HydroStar BGA 320/430/550 Twin twice the motor terminals.

7.2 Terminals

- Connection is carried out by means of screwless WAGO terminals
- Please observe the information.

▲ WARNING

The wires for motor feed have a paper casing!

Ensure that the paper casing is completely removed!

7.3 Motor connection

- Insert the motor cable into the M25 threaded cable connection so that the jacket is pushed through by approximately 50 mm.
- Securely tighten the threaded cable connection.
- Connect the motor supply line to the terminal strip according to the colour coding.

7.4 Extending the motor supply line

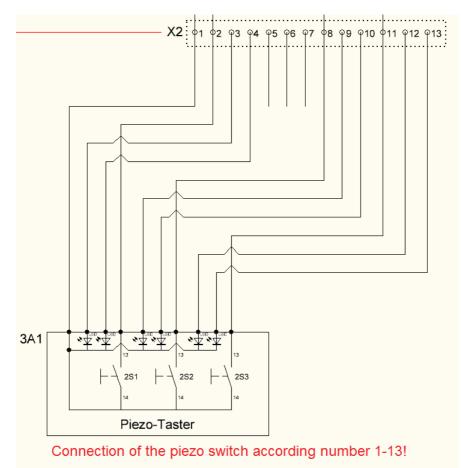

I NOTE: Observe the minimum cross-section of 16 mm²!

If it is necessary to lengthen the line, observe the motor's rotation direction. If the turbine is running in the wrong direction, invert the two connection lines.

- Shorten the original motor supply $(3 \times 6 \text{mm}^2)$ line to $\leq 5 \text{ m}$ (minimum 2 m)
- Extend up to a total length of 30 m with a cable cross-section of <u>16 mm²</u> fine wired!
- To extend the turbine cable, the original BINDER 3x16 mm² cable is recommended! (Art. No.: 5300115)

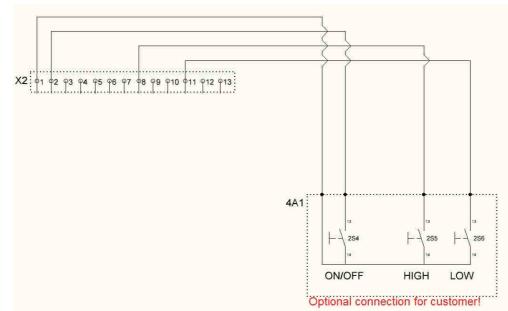

7.5 Connecting the HydroStar PIEZO Tri

- The connection cable is a 14-wire cable with cross-section of 0.5 mm².
- The cable can be lengthened with an equivalent cable up to 30 m.
- It must be ensured that the wires are connected with the same numbering.
- An underground junction box for cable lengthening must have a watertight seal.
- Terminal strip X2 is used for connection.
- Connect the wire number according to terminal number.
- Please also observe the circuit diagrams included in delivery!

I NOTE: Please also observe the circuit diagrams included in delivery!

7.6 Connecting an external operating device

By means of **push buttons** connected to the X2 terminal strip, the following functions can be controlled:

- On/Off by closing terminals 1-2
- Turbine acceleration by closing terminals 1-8
- Turbine deceleration by closing terminals 1-11
- Breaking capacity: 24VDC/20mA, maximum cable length 30m
- Please also observe the circuit diagrams included in delivery!

7.6.1 Instructions for operation with a smartphone

The X2 terminal strip can be used as an interface to an overriding control unit (e.g., Loxone). The terminal assignment can be found in the circuit diagrams included in delivery.

8 Start-up

Turn the unit on using the rotary switch on the front side of the control unit!

A ELECTRICAL HAZARD

Before starting the machine up, check the operation of the residual current device (RCD) on the machine side.

Check all lines for damage and make sure the electrical connections are secure.

I NOTE

Do not perform any trial runs unless the turbine is completely under water! Operating it above water or only partly in water will cause the drive motor to fail!

8.1 Remote control operation

▲ DANGER

The radio transmitter and receiver are pre-set to match at the factory and programmed for the operation of the HydroStar counterflow unit. Any reprogramming or using a second or third-party radio transmitter may damage the machine or harm people.

Before starting the turbine, make sure that no one is in the flow out area of the turbine. The sudden flow of water may lead to unpredictable reactions.

Hand-held transmitter IP67

8.1.1 Switching the turbine on and off

- Turn the unit on by briefly pressing button \bigcirc . After a delay of approximately 7 seconds, the turbine starts running at the minimum motor speed.
- Turn the unit off by briefly pressing button \bigcirc . The speed of the turbines is reduced and after approximately 5-6 seconds, the unit is switched off.

The green/red LED above button P1/P2 indicates the actuation of a button on the remote control unit! NOTE

After pressing the buttons of the hand transmitter, it takes approx. 2 seconds until the signal reaches the radio receiver. A hectic or repeated pressing of several keys can lead to malfunctions.

 Image: Image:

The range of the radio transmitter is 50 m under ideal conditions. The range may be severely limited because of local conditions. If the range is insufficient, an external antenna with up to 20 meters of cable can be connected and installed in a more favorable position of the building.

I NOTE

The radio transmitter fulfills protection class IP66 and IP67. A permanent submersion of the transmitter under water is not possible.

8.1.2 Water jet control

By pressing the **buttons** \land **or** \lor , the flow rate can be changed between the minimum and maximum speed.

9 Optional operation by PIEZO Tri

PIEZO Tri

If the HydroStar turbines are equipped with the PIEZO Tri switch, the HydroStar turbines can be operated both with radio remote control and with PIEZO Tri.

If the system is ready for operation, the LED ring of the \bigcirc -button lights up red. Press to confirm the on / off button, the system is switched on and the ring lighting changes the color. The water volume can be adjusted by pressing the buttons \uparrow or \downarrow . Indicate \uparrow and \downarrow by brief flashing in red, in which stage the turbine swimming system works. The button \downarrow is permanently red if the HydroStar is at the lowest level, the button \uparrow will remain red if the HydroStar is at the highest level, by pressing the ON / OFF button again the system turns off and the LED ring changes to red again.

I NOTE

The unit can be switched on with the remote control, and switched back off by using the PIEZO Tri switch. Actuating by remote control is also indicated on the PIEZO Tri.

10 Optional operation via touch display

Hydrostar Hudraci	Hauptmenü	
Ere Hagtmeni	0 m 0:00:00 0,0 km/h	Manueller Modus Automatik Modus
10 _s 0 _% 100 _%	200 m 0:03:20 3,6 km/h	Trainingsprogramme Welenbewegung
Perior and posterior and posterior	2000 m 0:50:00 2,4 km/h	LED Enstellurgen
	4.8.2	0 1 m2

HydroStar Touch-Display

Several users can be created in the main menu. The swimming data and the training program are always stored under the registered user.

- Manual mode
- Adjustment of the HydroStar output via slider
- Representation of the power in percent, km/h, m/s und m³/h
- Training program
- You can set and run a sequence with duration (time) and intensity (power of the system)
- This sequence can be changed again and again
- Wave motion
- Simulates a recurring current which can be adjusted in duration and intensity
- LED settings
- Two LED sliders can be used to adjust the LED spotlight (optional) in the brightness and the color.

Slider = touch surface on the screen

11 End of operation

At the end of operation and overnight, the machine should be switched off using the power switch on the control unit.

12 Shutdown / hibernation

DANGER OF DAMAGE

The turbine must not be allowed to freeze under any circumstances. Please observe the following instructions:

Two cases are considered during the wintering of the HydroStar turbines.

In the first case, the water is discharged from the pool, the turbine is entirely over water and in the second case, the water is not drained from the pool and the turbine is completely under water. **Case 1:**

- Turn off the control unit
- Attach a sign.
- Drain the water from the pool far enough that the turbine is completely above water.
- Protect the turbine against frost getting in with suitable material.

After the frost period:

- Remove insulating material from the turbine completely.
- Make sure that there is no residual material in the propeller or in the flow straightener.
- Refill the pool completely with water.
- Start again as described in section 8. Start-up.

Case 2:

- Turbine remains installed
- Turbine must be completely under water
- A freezing of the water must be prevented to the turbine (300 mm below water level)
- The turbine can be used during the winter against the freezing of the water
- Turbine runs at low speed over a period of time
- Pool is cleaned after wintering
- Ensure that there are no extreme dirt or foreign parts on the impeller or in the flow straightener
- Start as described in section 8 Commissioning

13 Maintenance and repair

13.1 General

All work on the HydroStar counterflow unit must be carried out by trained personnel. Before working on the control unit, disconnect it from the mains and secure it against being accidently switched back on.

13.1.1 Maintenance

- The HydroStar counterflow unit is maintenance-free.
- The underwater motor has no seals that have to be maintained or replaced.
- Make sure that no objects of pieces or clothing are caught on any protective equipment in the intake area. Remove those items when the turbine is switched off.
- Have a specialist inspect the counter current unit every two years.
- The control unit can be cleaned with a damp cloth. Do not spray!

13.1.2 Repair

- Repairs are only to be performed by suitably trained specialists or in the manufacturer's factory.
- Only use original BINDER spare parts for repairs.

13.1.3 Troubleshooting

▲ DANGER

In accordance with the Employers' Liability Insurance Association (UVV), interventions or repairs to the device may only be carried out by qualified technicians. Otherwise there is danger to people and equipment!

January 2015Completely newApril 2015Special model for salt water poolJuni 2015Installation situation updatedDecember 2016New installation, complete inspection and revision, troubleshooting

Recommended water properties:

- ✓ pH value: 6.8 7.8
- ✓ chloramine: \leq 0.5 mg/litre (preferably around 0.0 mg/litre)
- ✓ free chlorine: 0.3 2.0 mg/l (3000 20000 ppm)
- ✓ cyanuric acid: ≤ 100 mg/litre
- ✓ salt concentration: $\leq 0.4\%$ (4000 ppm) (4 g/litre)
- ✓ Metals: ≈ 0 mg/litre
- ✓ carbonate hardness: ≥ 2°dH (°dH = mmol/litre x 2.8);(°eH =mmol/litre x 3.5);(°fH = mmol/litre x 5.0)
- ✓ ozone: 0 mg/litre
- ✓ \sum chlorite + chlorate: ≤ 30 mg/litre
- ✓ Redox potential: ≥ 700 mV
- Ideally, the pool water should be treated in accordance with DIN (19643 1) and/or German Federal Environmental Agency guidelines (hygienic requirements for swimming pools)!
- Please note that a sufficient quantity of fresh water must be fed into the pool in order to prevent excessive salinity. This is best achieved by sufficient filter backwashing at regular intervals.
- Your swimming pool dealer will be glad to assist you with questions regarding water treatment and care.
- We use only premium quality materials that are optimally suited for swimming pool applications under the aforementioned conditions. However, in the event that one or more of the aforementioned parameters are not adhered to over an extended time period, or insufficient quantities of fresh water/no fresh water are/is fed into the pool, we will **not accept liability** for any damage incurred.
